The pages are numbered in two-part combinations, ranging from 426 to 501. Each entry includes the date September 6th, 2019, which suggests that the content may be related to an event or publication occurring on that specific day. If you'd like me to summarize any specific information or provide a more detailed explanation of what this text might be referencing, please let me know! The text appears to be listing multiple pages with similar content, each page corresponding to a specific number range. The entries are all dated September 6, 2019, and follow a consistent pattern. Each entry starts with "Soporte Page" followed by two numbers, which suggests that these are support pages for a particular system or application. The text is written in Spanish, indicating that it may be a document or resource intended for use by Spanish-speaking individuals or organizations. The date of 9/6/2019 appears to be repeated across all entries, suggesting that this was the publication date or release date for these support pages. A series of support pages (634-679, 681-705, 707-713) are listed with their corresponding dates for the same event: September 6, 2019. Each page has a Spanish title following PHTLS 9e. The following pages were updated on September 6, 2019: * Pages 738-739 * Pages 740-741 * ... * Pages 840-841 Note that this is likely a list of page updates or revisions in a Spanish-language edition of the book "PHTLS 9e" (Pediatric Trauma Life Support 9th edition). The pages listed are all dated September 6, 2019, and are related to Spanish PHTLS 9e: Soporte. The numbers range from 842 to 945, with each pair of pages (e.g., 842-843) appearing on the list. The PHTLS 9e manual provides support pages for Spanish speakers and includes access codes that will be sent via email within 1-3 business days. In the field, every second counts in treating trauma patients. The National Association of Emergency Medical Technicians (NAEMT) developed the Prehospital Trauma Life Support (PHTLS) program in collaboration with the American College of Surgeons Committee on Trauma (ASC-COT). The ninth edition of PHTLS reflects current, evidence-based knowledge and practice, emphasizing critical thinking as a foundation for quality care. The manual emphasizes the importance of rapidly assessing trauma patients to identify life-saving interventions. Every 2 minutes can be too late to prevent exsanguination in trauma patients. To address this, the XABCDE patient assessment mnemonic is used to prioritize exsanguinating hemorrhage in every patient encounter. This approach highlights the urgency of stopping bleeding in trauma patients. The manual aims to provide prehospital care providers with a systematic approach to assessing and treating trauma patients, with a focus on minimizing delays and ensuring prompt transport to an appropriate destination. PHTLS, Ninth Edition incorporates recent research and expert input to enhance clinical chapters on disability and environment. The updated edition includes: - Current guidelines for fluid resuscitation and spinal immobilization from credible sources - Advanced patient management techniques such as tourniquet placement, needle decompression sites, pelvic binder use, pediatric fluid and airway management - Focus on preventing injuries caused by distracted driving, falls in older adults, intimate partner violence - Addressing civilian tactical threats through vehicle safety and a new assessment methodology flowchart The PHTLS, Ninth Edition main textbook serves as the primary resource for trauma care, detailing medical evidence behind recommended practices. It will be paired with a new course manual featuring an engaging design to support learning and interaction. Access codes are provided within 48-72 hours of order confirmation between Monday-Friday 7:30am-5:30pm CST.
